INTRODUCTION

Pixpel was established to serve the crypto gaming community by providing an exceptional and versatile platform. The market for crypto gaming is continuously expanding, with more games, players, and market capitalization. Despite this growth, there is no specific marketplace, exchange, or centralized platform that caters to the needs of players and developers, especially for NFTs. Pixpel was created to solve this issue and provide specialized services to address the challenges facing the crypto gaming industry.

Pixpel is a platform that offers a range of services for the crypto gaming community. These services include an NFT warranty policy, a specialized marketplace for crypto gaming NFTs, a centralized exchange for crypto gaming, a gaming wallet, and many tools to track NFT statistics both inside and outside of games. By providing these tools and services, Pixpel aims to become the most trusted and secure option for both players and game developers. Pixpel's services are designed to provide a reliable and user-friendly base for the crypto gaming community to grow upon. By establishing honest standards and enabling secure investment through its various tools and functions, Pixpel empowers participation and secure investments in the Web3 landscape with its innovative approach.

This White Paper has been created to provide a comprehensive understanding of NFTs and their potential applications in the crypto gaming industry, with a focus on how Pixpel can assist players and developers in utilizing them. We have conducted extensive research from reliable sources to explain the concept of NFTs and their diverse uses. Our objective is to shed light on the various opportunities that NFTs present in the gaming industry and how Pixpel's services, such as our NFT warranty policy, marketplace, centralized exchange, decentralized exchange, gaming wallet, and tracking tools, can help players and developers to benefit from them. We would like to clarify that any logos and information presented in this document are for informational purposes only and do not indicate any endorsement or affiliation with specific businesses or organizations. Please note that the information presented in this whitepaper is not intended as financial advice and should not be construed as such. Furthermore, the contents of this document are subject to change as our project evolves and develops.

PIXPEL´S TEAM

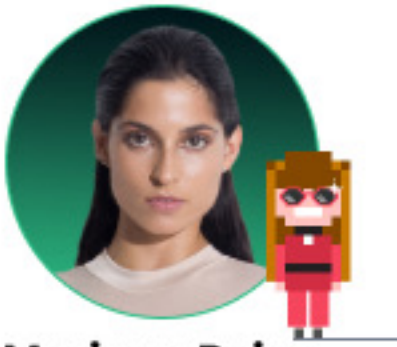

Juan Vivas
Founder & C.E.O

Juan Vivas has a proven track record in challenging projects. He spent seven years at Mindray Bio-Medical, a Fortune 500 company, rising to Radiology Regional Sales & Marketing Manager for LATAM before founding Pixpel.

Previously, he led North America and LATAM operations at Cherub Technology, launching its U.S. branch.
He studied economics at The Central University of Venezuela and later Mandarin at Shenzhen University.

Mariana is a product designer specializing in Web3 gaming products. With expertise in branding, UI/UX, and graphic design, she creates innovative and visually compelling experiences. Educated at Instituto de Diseño de Caracas, she stays ahead of trends to push creative boundaries.

C.T.O

PIXPEL´S TEAM

Stefan, a seasoned crypto enthusiast with a diverse portfolio of projects, brings valuable expertise and a deep understanding of the industry. With a psychology degree and rich management experience, he is dedicated to fostering the growth of the NFT community. Stefan's vision is to create a safe and user-friendly investing environment, leveraging Pixpel as a promising solution to the challenges faced in the evolving Web3 landscape. His commitment to transparency, innovation, and customer satisfaction aligns perfectly with Pixpel's core values, ensuring a rewarding experience for all users.

Stefan Zanev
C.C.O.

Javier García
Video Producer

Javier, a passionate gaming enthusiast, has extensive experience managing communities on platforms like Discord and Telegram. He started by supporting MMORPG servers and later ventured into the growing realm of NFT games, gaining valuable insights in crypto gaming communities. Javier prioritizes positive engagement, fostering pleasant and informative environments. At Pixpel, his commitment is to establish a trustworthy platform for meaningful gaming interactions.

PROBLEMS

NFTs and NFT-based crypto games are still in their early stages of development, and with this comes various challenges that Pixpel aims to address to support the crypto gaming community.

One of the major concerns in the crypto gaming space is the risk of financial loss, which has made many potential investors hesitant to participate. Malicious actions by some developers have caused trust issues within the community, making it difficult for players and investors to identify reliable and secure projects.

Moreover, the lack of financial tools and standardized criteria for evaluating the performance of Web3 crypto games adds to the uncertainty surrounding investments in this space. With information scattered across different platforms, there is a need for a centralized resource that provides comprehensive and reliable insights for the crypto gaming community.

The infamous "rug pulls" have further complicated matters, where developers abandon projects and abscond with investor funds. This phenomenon makes it challenging for players and investors to distinguish between trustworthy and potentially fraudulent projects.

Listing tokens on exchanges is another obstacle faced by developers, as crypto game tokens often suffer from depreciation in value, leading to a perception that the crypto gaming market is risky. Pixpel aims to overcome this perception by creating specialized NFT marketplaces for their games and actively addressing significant issues within the crypto gaming community.

By addressing these challenges, Pixpel aims to foster a more secure and thriving environment for NFT-based crypto games, providing a reliable platform for both developers and investors to engage and grow within the crypto gaming industry.

SOLUTIONS

Pixpel is committed to creating a secure and user-friendly platform that empowers players and developers to confidently embrace NFTs' potential. Our comprehensive range of services includes a unique NFT warranty policy, centralized and decentralized exchanges, a gaming wallet, and advanced tracking and searching tools. These features form the foundation of a reliable and secure environment for the thriving crypto gaming community to flourish.

As an innovative force in the industry, Pixpel strives to set the standard for the crypto gaming community by addressing its current challenges. Our platform introduces a unique NFT warranty policy, vastly reducing the risks and consequences associated with rug pulls and ensuring a safer experience for players. Moreover, developers can leverage Pixpel to publish their games cost-effectively and with enhanced security, while players can easily discover and make informed decisions about their desired games.

Pixpel's investment management tools empower players to access comprehensive charts and financial data for each NFT they own, accessible through both a web browser and our dedicated mobile app. Additionally, our centralized exchange automatically lists tokens from Pixpel games, fostering a diverse and dynamic marketplace for buyers and sellers.

We are certain Pixpel's suite of tools will have a positive and transformative impact on the crypto gaming community. By enhancing the quality, quantity, and accessibility of investments, our platform benefits both players and developers, driving the growth and prosperity of the entire ecosystem. Join Pixpel today and unlock the full potential of crypto gaming.

ABOUT THE PLATFORM | DEVELOPERS

The Pixpel Platform comprises two primary sections: "Developers" and "Players." These sections offer distinct features, decks, and windows tailored to their respective needs. Developers can create up to five games on a single account, following permission and completion of Pixpel's filters and standard procedures.

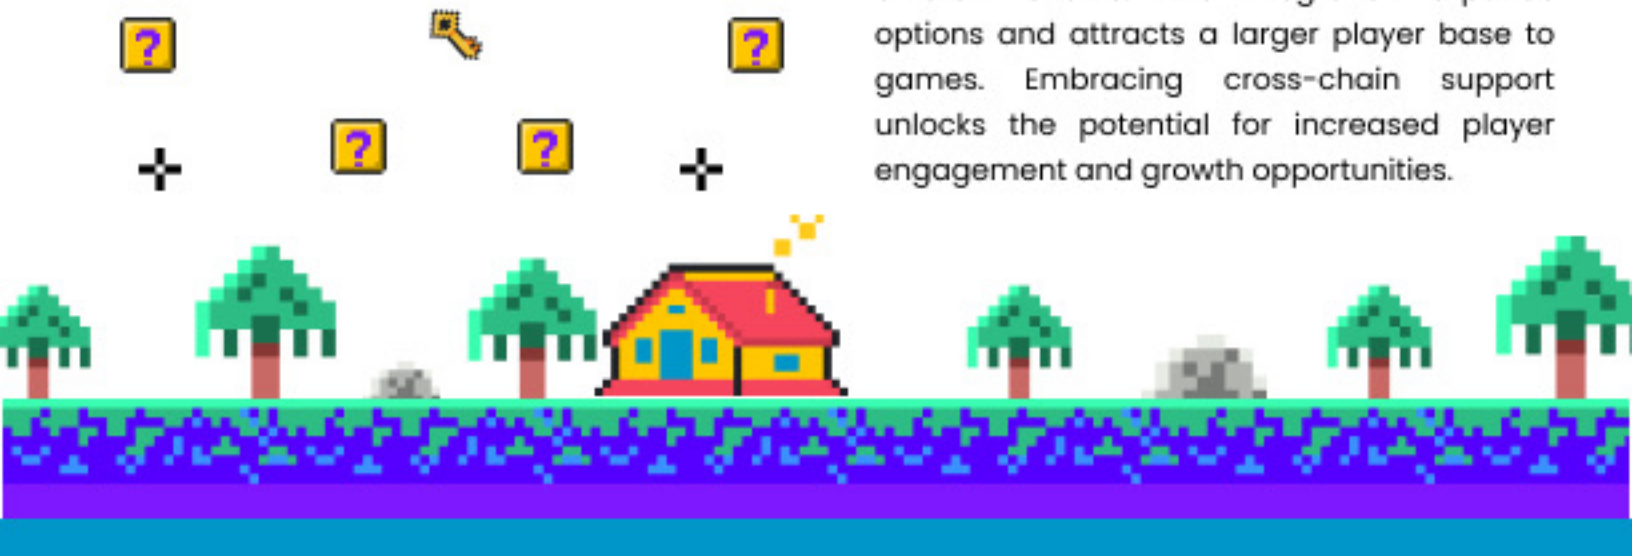

The developer's deck is divided into five main sections, each serving a specific purpose. These sections are "Game Dashboard," "NFT Factory," "Staking Portfolio," "Token Room," and "Wallet." Additionally, there is a "Launchpad" section available.

- Developers/Game Dashboard: This main section presents developers with an overview of the Pixpel tool's implementation, offering specific explanations within each segment of the Developer section. The Game Dashboard provides insights into players' data, such as the number of players who have purchased NFTs with warranty coverage, the duration they've spent playing NFTs (whether in bulk or specific instances), and the remaining quantity of mystery boxes yet to be opened, among other relevant metrics.
- Developers/NFT Factory: In this section, developers have the ability to create NFT collections, mint new NFTs, and establish the logistics for distributing mystery boxes. The NFT Factory enables developers to mint NFTs in bulk and determine the quantity to be offered in the marketplace, whether through auctions, fixed prices, or mystery boxes. Developers can also leverage the marketing services offered by Pixpel to enhance the visibility of their NFT listings."
- Developers/Staking Portfolio: This section enables developers to create staking offers tailored to players based on their token liquidity. Developers have full control over the amount of liquidity they place on Pixpel's side and retain for themselves. Additionally Developers can customize the staking nature, transitioning from Locked to Unlocked, and implement their own Annual Percentage Rate (APR) and penalty fees for unstaking from the contract. Transparent staking details are presented to players, providing necessary information to make informed decisions. It's important to note that Pixpel is not responsible for any liquidity outside of its platform.
- Developers/Token Room: This room is designed to make developers' lives easier. They no longer need to worry about other platforms listing their token descriptions to make them visible and understandable to players. or rely on outdated information about their token fluctuations, nor do they need to use advanced codes to implement their tokenomics, vesting, and everything related to their token. This room provides developers with a total solution in a more visual and friendly environment.
- Developers/Business Wallet: The developer's wallet is specialized in developers' needs. They can create up to five different wallets related to one account. In these wallets, they can manage liquidity such as rewards pools, and use them exactly like a normal wallet. Business Wallets provide a comprehensive overview of fund management, including historical projections and all the services necessary for the business to progress and make decisions, including fiat withdrawals. To make all this happen, Pixpel has a connection module that enables quickly updated data between platforms and games.

ABOUT THE PLATFORM | DEVELOPERS

Within our platform, the Launchpad section offers developers lucrative opportunities to generate revenue and promote their projects effectively. Through the utilization of Rockets and Ships, developers can harness the power of our community to maximize exposure and drive success.

- Developers/Rockets: Developers can utilize Rockets to facilitate token sales, providing players with the opportunity to purchase tokens and participate in the project's growth. Rockets display crucial information about tokens, including liquidity and various other statistics, increasing the trust between developers and players. By leveraging the Launchpad's Rockets, developers can attract investors, drive liquidity, and foster the success of their projects while generating substantial revenue.
- Developers/Ships: Players who have influence on platforms such as Twitter, YouTube, TikTok, or Instagram can join our Ships. By hopping on these Ships, they can utilize their reach and creativity to create engaging content such as videos, tweets, and more, in order to promote games. Developers can leverage the marketing services provided by these Ships to expand their project's visibility and increase its success.
- Developers/Dex/Swap Master: Enhances games by providing effortless and secure in-game currency exchanges at the current market price. It offers a seamless trading experience, expanding players' access and boosting engagement within the game.
- Developers/Dex/Limit: Orders functionality enables players to set automated buying and selling commands for currencies, even when they are offline. This feature attracts more players to the game by offering them greater control over their trades and enhancing their trading experience.
- Developers/Dex/Liquidity Pools: Enables automated buying and selling commands for currencies, even when players are offline. This feature enhances the trading experience and attracts more players. Integrating Pixpel's Liquidity Pools strengthens the game's ecosystem, allowing players to earn rewards while contributing to overall liquidity. Developers have the flexibility to establish custom fees, creating a tailored environment that enhances the game's functionality.
- Developers/Dex/Bridge: Pixpel's Bridge function seamlessly enables seamless cross-chain swaps for asset exchange between different chains. This integration expands options and attracts a larger player base to games. Embracing cross-chain support unlocks the potential for increased player engagement and growth opportunities.

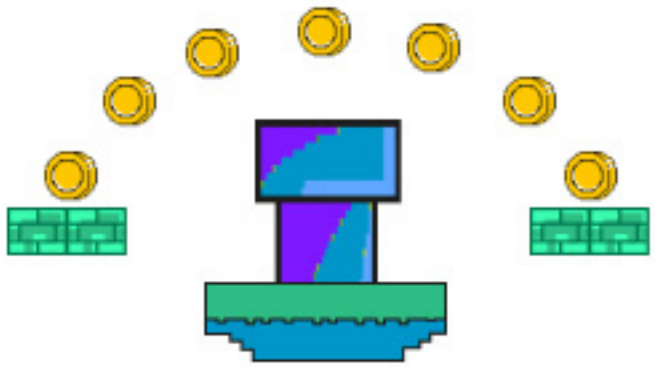

ABOUT THE PLATFORM | PLAYERS

"The players' deck comprises seven main sections: Game Marketplace, NFT Marketplace, Inventory, Shopping Kart, Store, Staking, and Peer-to-Peer. Each section offers distinct features and functionalities, enhancing the players' experience. Let's explore the details of each section:

- Players/Game Marketplace: This marketplace lists all our game partners. Players can easily research and select games they are interested in. Upon selecting a game, the game lobby will appear, presenting all relevant information, This includes visuals, videos, screenshots, player count, the number of NFTs available in the game, the age of the game, mystery boxes, and other tools and information necessary for players to make informed investment and gameplay decisions.
- Players/NFT Marketplace: The Pixpel NFT Marketplace stands out from other marketplaces. Here, players can engage in the buying and selling of NFTs through auctions or fixed prices. Developers, on the other hand, utilize Mystery Boxes or limited-time auctions to showcase their newly minted NFTs. Going beyond basic functionality, the Pixpel NFT Marketplace provides players with exclusive insights into each NFT, including its age, previous owners, as well as detailed information about the NFT's skills, abilities, level, and more.
- Players/NFT Marketplace/Inventory: Here players can conveniently view all the NFTs they own in an inventory format , similar to an RPG game. It offers a comprehensive overview of each NFT, including game progress, win/loss ratio, NFT income and outcome, and a customizable ROI bar that allows players to track and achieve their desired targets. Additionally, players have the flexibility to list and delist their NFTs on the marketplace, perform repairs or fuel them, and take any necessary actions to ensure the optimal functionality of their NFTs.
- Players/NFT Marketplace/Shopping Cart: The Pixpel shopping cart offers players the convenience of adding products from the Game Marketplace or the NFT Marketplace. It functions as an integrated shopping cart, simplifying the calculation of the total investment. The Shopping Cart utilizes the player's Gaming account for purchases, providing a seamless experience making it much easier for players to buy more NFTs.
- Players / NFT Marketplace / Store: This dedicated space allows players to take control of their NFT sales, promote their creations, and engage with the community. Sellers can actively participate by answering questions and providing information about their NFTs, creating an interactive and dynamic environment for digital asset transactions. It provides a platform to advertise NFTs, enhance visibility, and establish connections among players.
- Players/Staking: The Staking section on the platform showcases staking offers from developers, categorized into Locked and Unlocked. When players choose to invest in a staking offer, a small window pops up providing important details. Players also have the option to review additional information in the game's lobby before making their investment.
- Players/Peer to Peer: The P2P trade platform enables players and developers to trade Tokens and Fiat. Pixpel facilitates secure transactions between both parties, serving as a reliable bridge.

ABOUT THE PLATFORM | PLAYERS

- Players/Wallet: The Wallet is an investor-focused wallet that offers comprehensive services for players, including features like swapping, fiat deposit and withdrawal, professional windows and charts for investment tracking. It is organized into seven accounts: Start Account, Gaming Account, Trading Account, NFT Collection Account, Staking Account, and Launchpad. Transfers between accounts are free of charge.
- Players/Wallet/Start Account: The Start Account serves as the entry point for all funds entering the wallet. It receives transfers from other wallets, fiat deposits, and purchases made with credit cards or bank transfers. All incoming funds are initially allocated to the Start Account. Withdrawals, transfers to other wallets, and P2P payments are also initiated from the Start Account.
- Players/Wallet/Gaming account:
This specialized account allows players to manage their game-related transactions with ease. It enables the receipt of rewards from games, purchases of NFTs, and collection of funds from NFT sales. The Gaming Account eliminates the need to add external links to recognize game tokens and switch between wallets for trading or converting to fiat. It is directly connected to the game and is subject to withdrawal fees and restrictions imposed by the developer. The Gaming Account serves as the primary connection between developers and players in Pixpel, with Pixpel enforcing all rules established by developers and accepted by players.
- Players/Wallet/Trading Account: The Trading Account is exclusively used for trading purposes, including buying and selling cryptocurrencies on our exchange platform and engaging in other trading-related activities. All trading activities are conducted through the Trading Account.
- Players/Wallet/NFT Account: This account is dedicated to players' NFT holdings. Within the NFT Account, players can conveniently access and view all the NFTs they have acquired. It provides essential information about each NFT, including purchase price, date of purchase, earnings, and game expenses. Players also have the option to transfer NFTs from the NFT Account to external wallets outside the Pixpel platform and list them for sale on Pixpel's NFT Marketplace.
- Players/Wallet/Staking Account: The Staking Account offers players a professional portfolio for managing their staking activities. It provides helpful tools like pie charts and projection charts to monitor and analyze stake performance. With the Staking Account, players can easily manage their stakes and calculate penalties for early unstaking. It serves as the centralized hub for players to effectively manage their staking endeavors.

ABOUT THE PLATFORM | PLAYERS

- Player/Launchpad: Pixpel's Launchpad is a versatile platform that connects players with investment opportunities in new games. It serves as a hub for players to explore and acquire tokens from a diverse range of games. Projects that have undergone thorough auditing processes or implement Know Your Customer (KYC) procedures are marked accordingly to ensure transparency and enhanced security. By offering access to relevant information, players can make informed investment decisions and actively contribute to the growth of exciting new ventures.
  - Player/Launchpad/Rockets: The Launchpad's "Rockets" section provides players with investment opportunities to acquire tokens from new projects. Audited projects are clearly marked for transparency and trust. Projects implementing Know Your Customer (KYC) procedures offer enhanced security. Stay informed and make sound investment decisions through our Launchpad offerings.
  - Players/Launchpad/Ships: Influencers and aspiring influencers have a special place in our ecosystem. The "Ships" function within our Launchpad allows developers to connect directly with content creators to develop compelling content for their projects. This collaboration fosters mutually beneficial relationships, enabling influencers to leverage their reach and expertise in supporting the growth of exciting new ventures. Engaging with Ships helps monetize influence and
  - Players/Launchpad/Vest: The Vest section offers valuable information regarding the vesting period and other relevant details of players' tokens. This feature provides transparency and control over token holdings, allowing players to track the duration of vesting and stay informed about associated terms and conditions. It ensures a clear understanding of when tokens will be fully available for trading or other purposes.
  - Player/Dex/Swap Master: Players can easily exchange coins between cryptocurrencies at the market price. It offers players the convenience of swift and hassle-free crypto swaps, expanding their access to a growing range of cryptocurrencies.
  - Player/Dex/Limit Orders: Pixpel's Limit Orders feature enables players to optimize their trading strategy. It allows for the setting of specific commands to buy or sell currencies based on conditions, such as reaching a particular price. This feature provides players with the ability to take advantage of market movements and execute trades automatically, even when offline.
  - Player/Dex/Liquidity Pools: Pixpel's Liquidity Pools provide players with the opportunity to earn passive income and contribute to the community. By participating in the pools, players can receive rewards when others exchange their coins, creating a mutually beneficial ecosystem.
  - Player/Dex/Bridge: Bridge function allows players to explore cross-chain exchanges effortlessly. It offers the opportunity to diversify portfolios and embrace the versatility of cross-chain trading by seamlessly swapping coins between supported chains.

SERVICES CATALOG | DEVELOPERS

Pixpel is a platform committed to delivering services tailored to crypto players and developers. Our comprehensive range of services for developers includes the following:

- Pixpel's Smart NFT Marketplace: Pixpel's Smart NFT Marketplace is your all-in-one solution for minting, managing, selling, and promoting game NFTs effortlessly. Our powerful tools enable you to create bulk quantities of NFTs, customize attributes and skills to align with your game's logistics, and seamlessly sell these unique assets through mystery boxes or auctions in just minutes. With Pixpel's extensive marketing efforts, we attract players from around the globe, directing them to your Game Lobby. All you need to do is build a reliable game ecosystem with dependable tokenomics, adhere to our rules, and showcase your game on our platform.
- Token Management: This section offers a complete solution for all aspects related to your token. From creating and customizing token features such as total supply to launching your ICO with Pixpel, we provide a wide range of services. You can implement withdrawal restrictions and fees and set up automatic notifications to players with just a few clicks.
- Staking creation: With just a few simple steps, you can easily create appealing stake offers in the market. Our exciting new features include the ability to choose the amount of staking allocated in Pixpel Holdings, APR projection analysis, APY for customers, and the option to provide investors with an explanation of the strategy to achieve that APY.
- Decentralized Exchange: Pixpel's Decentralized Exchange enhances games by offering players a secure and seamless trading experience. It enables your players to trade a wide range of assets, providing them with increased flexibility and opportunities for in-game transactions. With our Decentralized Exchange, you can create a vibrant in-game economy where players can freely buy, sell, and exchange assets.
- Warranty income: As part of our comprehensive services, Pixpel offers incentives for NFT warranty renewals. By providing this additional layer of security, the warranty program increases player confidence and encourages more participants to join the platform. You receive 66.6% of the policy for the first renewal, 80% for the second renewal, and 100% for the third renewal, ensuring a fair and rewarding experience for all parties involved.
- Launchpad: Pixpel's Launchpad is a dedicated platform for you, providing you with an avenue to showcase and launch your innovative projects. With the Launchpad, you can connect with potential investors, access funding opportunities, and gain valuable exposure within the crypto gaming community. This dynamic platform serves as a gateway for you to present your projects, collaborate with influencers, and attract a wider audience, ultimately fostering growth and success in the crypto gaming industry.

SERVICES CATALOG | PLAYERS

Players in the world of crypto games are not only enthusiasts but also investors, seeking both entertainment and financial opportunities. Pixpel is dedicated to bringing order and establishing trust within the crypto gaming community. Our services designed specifically for you include:

- NFT Warranty: Pixpel offers the option to acquire warranty policies for newly minted NFTs. These policies can be renewed quarterly with a renewable fee.
- KYC: Game developers publish their information on our platform, and we meticulously verify its accuracy, making it easier than ever to check for Know Your Customer (KYC) availability.
- Game & NFT Marketplace: As players ourselves, we understand the challenge of finding a stable Web3 game that aligns with your preferences and reliability. In Pixpel's Marketplace, effortlessly search, filter games, and find your perfect match. KYC and audited games are marked for added confidence and security."
- NFT Management: Our NFT Inventory is an intelligent gallery, enabling you to visualize and organize your NFT collection. The NFT Inventory offers a range of tools, including game history, win/loss summaries, customized ROI bars, warranties, income/outcome projections. All these valuable insights are presented through visually engaging graphs and charts, enabling you to analyze your NFT portfolio at a glance.
- Gaming Wallet: Designed to enhance your experience, our specialized wallet simplifies token, coin, and fiat transfers with its five different accounts. Please note that certain restrictions apply to the Gaming Wallet in accordance with game policies.
- Launchpad: Pixpel's Launchpad is your gateway to a world of investment possibilities in new games. As a player, this versatile platform is designed to serve you, connecting you with a diverse range of games and enabling you to acquire tokens with ease.
- Rockets: Our Launchpad's "Rockets" section provides you with the opportunity to explore and invest in emerging tokens. Projects that have undergone audits are prominently marked, as well as projects that have implemented Know Your Customer (KYC).
- Ships: In our Launchpad, influencers play a crucial role. Through the "Ships" function, developers can collaborate with influencers to create compelling content promoting their projects.

NFTs represent more than just digital property. Particularly in the context of Web3 games, NFTs serve as lucrative revenue generators, transforming them into virtual investment assets. At Pixpel, we recognize the significance of NFTs and provide comprehensive warranty policies akin to those offered for traditional investment assets.

- Warranty Methodology: When a player decides to purchase an NFT from a developer, the money doesn't move directly from the purchaser's pocket to the seller. Instead, it is relocated as follows:
- Smart contract: A smart contract, valid for three months, is created with the value of the warranty. The fee to create this contract is 10%. This contract can be renewed up to three times, with renewal fees of 12% for the first renewal, 14% for the second, and 16% for the third. When the smart contract ends, the warranty sum is released to the seller.

Conditions to claim warranty: The warranty funds are held in a smart contract, in accordance with the original warranty conditions. To claim the warranty, the following conditions must be met:

- The game is not working or is down for a period of 15 consecutive days.
- The NFT is not available to play in the game for 10 consecutive days.
- Game developers and/or representatives are not communicating on official platforms or are missing for a period of 5 consecutive days, including holidays.
- Players cannot withdraw the number of tokens established by the game developers for a period of 10 consecutive days.
- The game's safe supply of tokens is drained by 30% of the total, either by hackers or by anyone else.
- The developers engage in any form of rug-pull, violating the established tokenomics to gain extra profits or inappropriately displace resources.

GAME & NFT MARKETPLACE

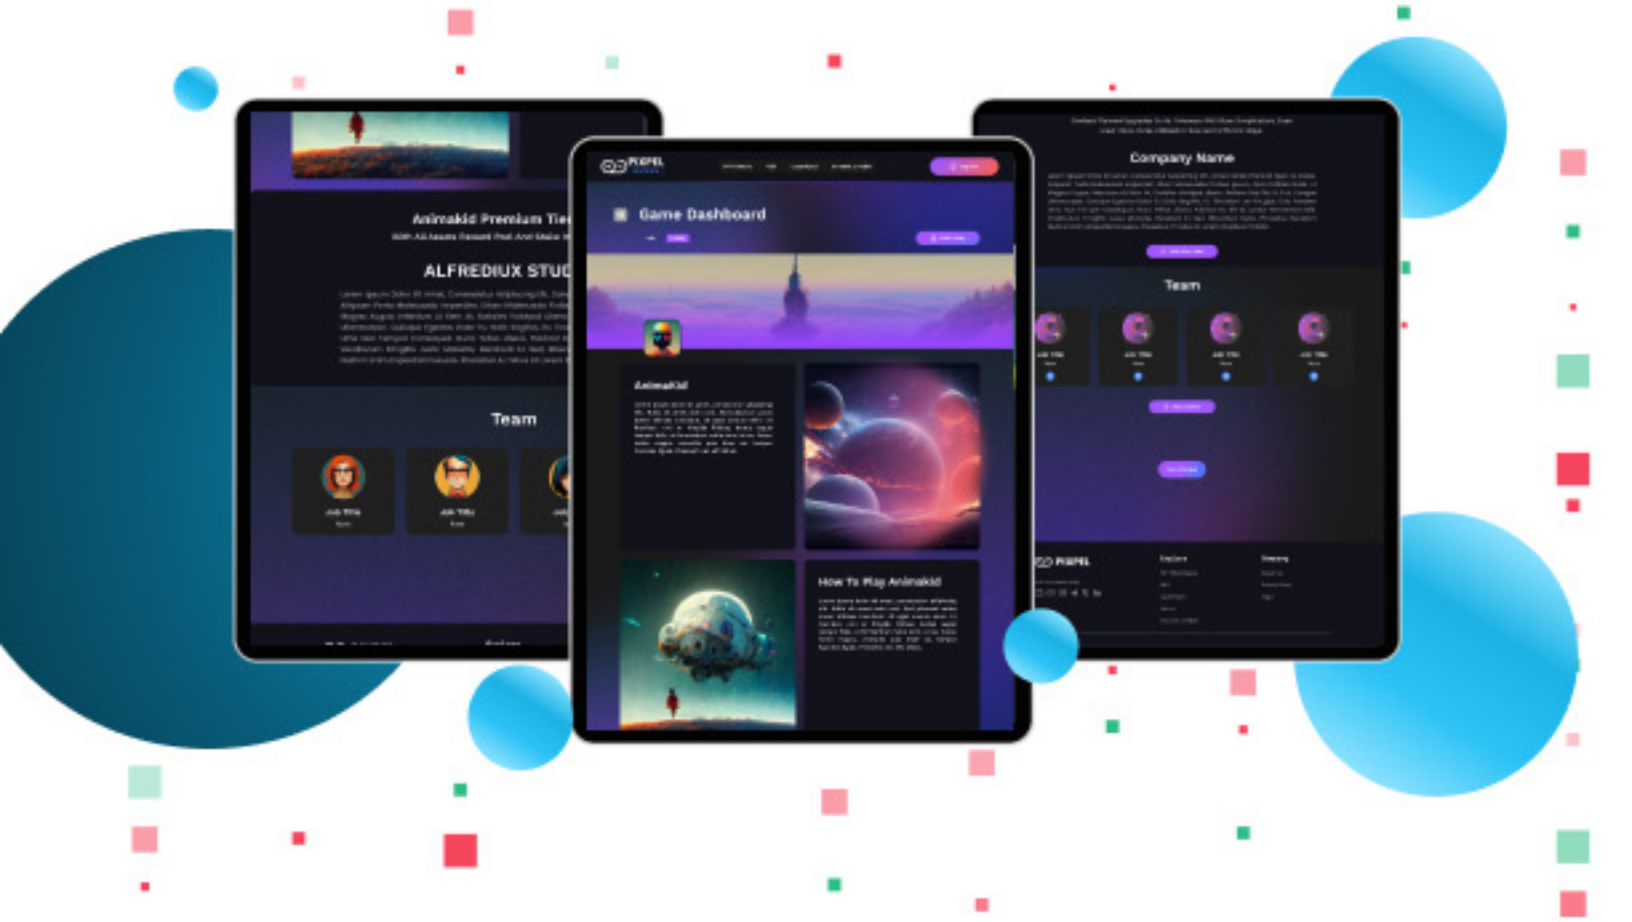

Pixpel is specifically designed to showcase games in an organized and user-friendly manner, sorted by categories and tailored to meet user requirements. Our platform presents games with informative videos and screenshots, featuring two distinct marketplaces: the NFT Marketplace, offering top-quality in-game assets, and the Game Marketplace, where players can explore their preferred game types. These marketplaces seamlessly connect through our integrated shopping cart, enhancing the overall user experience.

- The NFT Marketplace: is a platform where developers can sell their NFTs through auctions, mystery boxes, or direct sales. Additionally, players have the opportunity to sell their used NFTs in this marketplace.
- Dynamic: The NFT Marketplace serves as a store to buy and sell NFTs related to all games subscribed to the Pixpel platform.
- Description: The NFT description includes comprehensive information about both in-game and out-game attributes.
- In-game: This section lists all the attribute that affect the game's outcome, such as skills, perks, and attributes associated with the NFT.
- Outside-game: This section provides information on previous purchases, including medals, trophies, purchase price, skins, and any applicable prizes.
- The Game Marketplace: is a gallery that displays all the games affiliated with Pixpel's platform. Players can search for their desired game based on the gameplay mechanics, rather than solely based on NFTs.
- Dynamic: The Game Marketplace is a portal that helps players find games based on the gaming experience they provide.
- Choosing: Players have the option to quickly choose a game by pressing the cart button or take a detailed approach by going to the lobby of the game.
- Shopping cart: When a player clicks on the shopping cart option in the Game Marketplace window of the game, a mystery box will be added to their shopping cart.

- Game Lobby: The game lobby is a dedicated section providing relevant details of the selected game, including rules, gameplay mechanics, in-game items, and other important information, all reviewed and approved by Pixpel for quality and reliability.
- Store: The specialized marketplace where players can easily sell NFTs and engage in conversations with buyers to discuss details and specifications. It offers a convenient platform for seamless transactions and interactive communication.

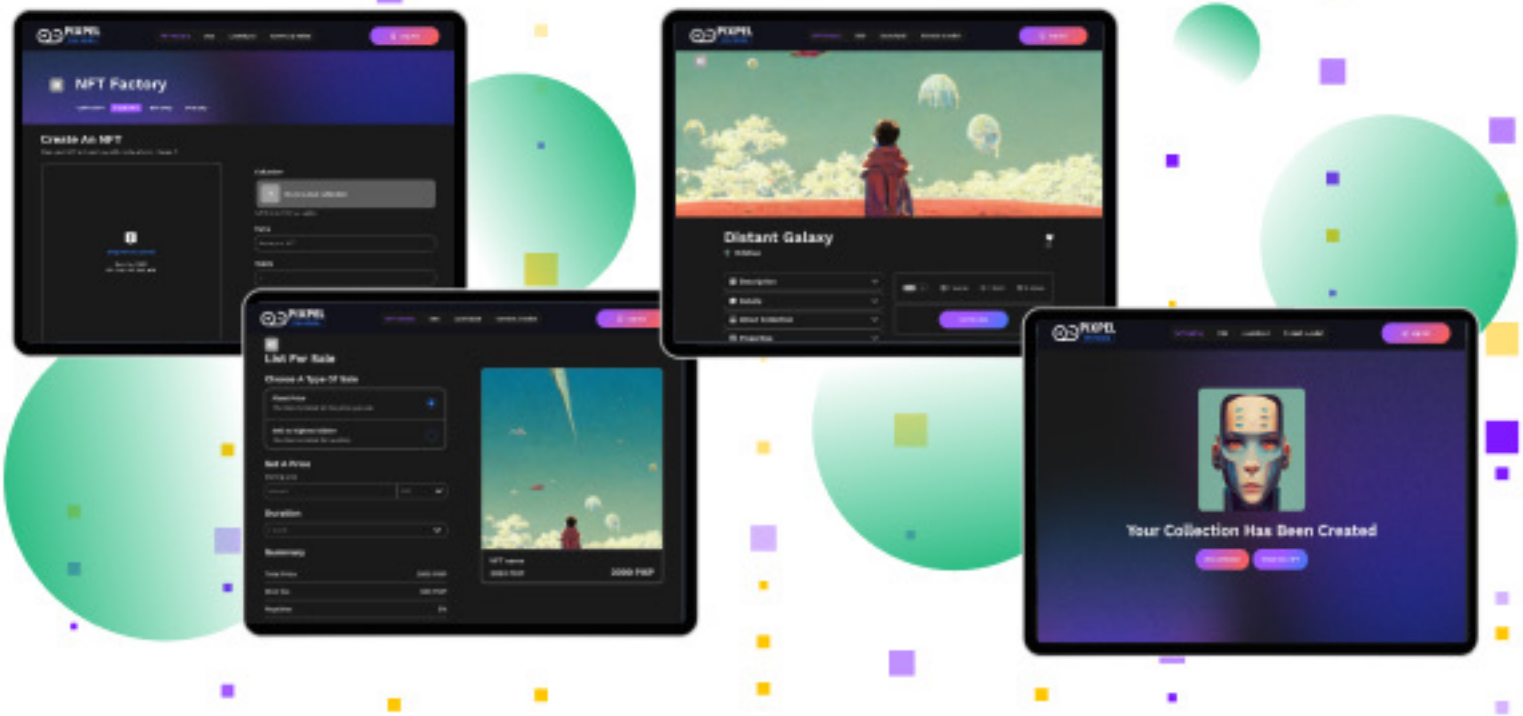

KYC & GAME LOBBY

On Pixpel, every game is required to have a lobby page where developers must provide all the crucial information that players need to invest in the game. Our team will carefully review and verify the information listed on the Pixpel platform. Here are the details:

- Information about the game and its logistics
- Game's white paper.
- Information about the team behind the game.
- Promotional images and videos.
- Screenshots and videos of the actual game.
- Number of players.
- Number of transactions.
- NFT minted and sold.
- Access to the NFT marketplace of the game.
- Launchpad Rockets.
- Launch Ships.
- Detailed explanation of how the tokenomics work.
- Updated information on the supplies responsible for maintaining the token value.
- A window to show transaction details related to reward pools and token supplies created to increase player rewards.
- Tokens related to the game.
- Token price and updated charts.
- Staking options created with tokens related to the game and its nature.
- Number of investors staking with the game tokens.
- Official social network links and last post date.
- Comments from the community about the game.

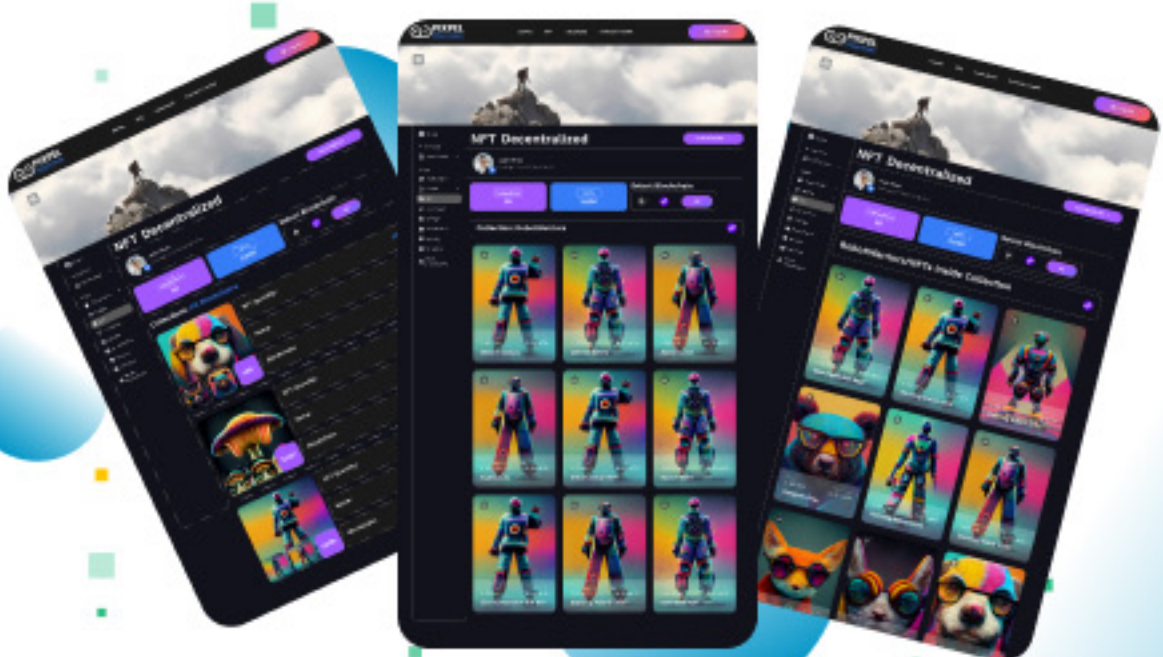

NFT FACTORY

Pixpel platform has an NFT creation center exclusively designed for game developers, known as NFT Factory. Within this section, developers are equipped with a diverse array of tools to mint NFTs according to their game's specific logistics. They have the flexibility to assign properties to their NFTs, such as stats, prices, and other essential attributes. Pixpel platform efficiently organizes NFT groups into collections, ensuring a seamless experience for both developers and players.

- Collection creator: Allows developers to include images and text to explain the content of the collection, which is created for players.
- NFT Wizard: Once the collection is created, the NFT Wizard assists developers in minting game NFTs. The NFT Wizard enables developers to add a range of properties to the NFT, including level, skills, stats, and anything else they desire. The skills and stats can be sorted separately.
- The listing: Once the NFT is created, the NFT wizard provides the developer with the option to sell the NFT as a single item or through a box. If the developer chooses to sell through a box, it will lead them to a portal called "Wrap in a Box." Alternatively, if they choose to sell it as a single item, they can select to list it at a fixed price or put it up for auction. The processes for a fixed price and auction sales are completed in subsequent steps.
- Wrap in a box: This provides the developer with the option to sell the newly created NFT through a clear box, where the buyer knows what they are purchasing, or a mystery box, where the contents are unknown until the box is opened. The developer can also choose to sell the NFT through a fixed price or auction. These options can be further customized in a separate step, including creating probability settings for NFTs appearing in boxes and their pricing.

GAMING WALLET

Pixpel has created two different types of wallets: The Business Wallet for developers and the Gaming Wallet for players. Both wallets are designed to provide the necessary services for their respective users. The following provides an explanation of each wallet:

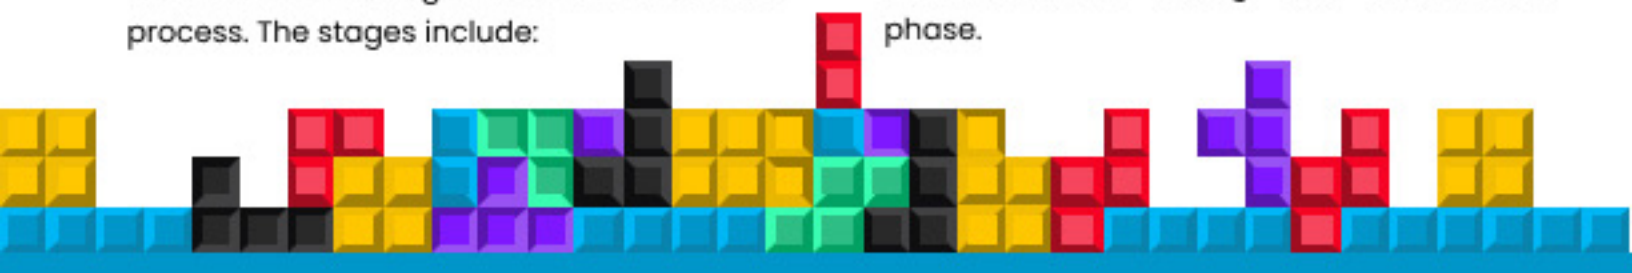

- Gaming Wallet: The Pixpel gaming wallet has been created to offer an all-in-one solution for players with investment strategies in gaming. The wallet is divided into five different accounts, and cryptocurrency can be transferred between them without incurring any fees. The function of each account is explained below:
- Start Account: This is the primary account of the wallet, where all crypto and fiat deposits are initially collected. It provides an overview of the wallet and displays the total amount of crypto and fiat across all the accounts.
- Trading Account: This account is specifically for trading purposes, and both the DEX exchange and the DEX peer-to-peer platform are linked directly to it.
- Staking Account: If a player wishes to stake funds in a game pool, they must first transfer the funds to the staking account. All staking investments made by the player are listed here with relevant details.
- NFT Account: This account serves as a gallery to display all NFT properties owned by the player. It provides an overview of NFT investments made, and details regarding NFT income and outcome in games. Here, players can buy, sell, and even play NFTs.
- Gaming Account: This account is used for all games listed on Pixpel. It is the account that is linked to games, where players receive rewards and spend them inside games. All tokens used to play games are listed in this account, and if a game has withdrawal controls, Pixpel's gaming account will enforce them.

PIXPEL LAUNCHPAD

Connecting Game Developers and their Community

Pixpel Launchpad is a revolutionary platform designed to connect game developers with their community, enabling them to secure funding for their projects. By leveraging the power of community engagement and investment, Pixpel Launchpad aims to foster collaboration, innovation, and financial support within the gaming industry.

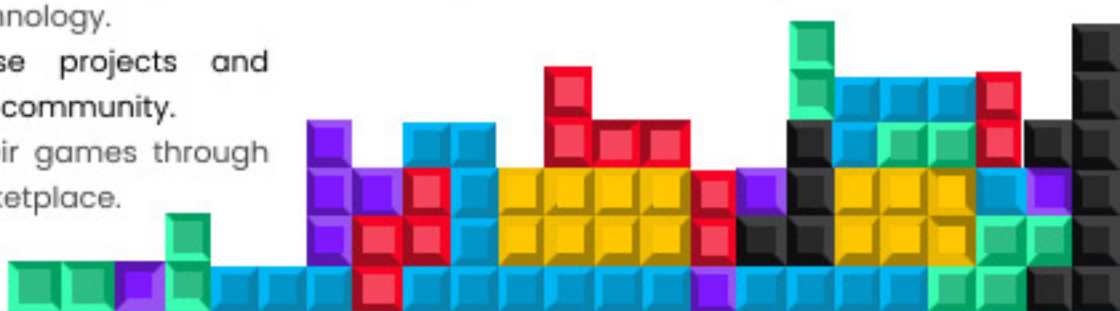

- 1.Introduction: Pixpel Launchpad serves as a bridge between game developers and their community, facilitating the funding of game development projects through a streamlined and transparent process. By leveraging blockchain technology and smart contracts, Pixpel Launchpad ensures the security and accountability of investments while providing a user-friendly experience for both developers and investors.
- **2. Core Features**
- 2.1 Project Creation and Marketplace: On Pixpel Launchpad, game developers can create projects, referred to as "rockets," which represent their game development initiatives. The marketplace serves as a platform where these rockets are showcased to potential investors, allowing them to evaluate and contribute to projects that align with their interests.
- 2.2 Rocket Stages: Pixpel Launchpad categorizes rockets into distinct stages to facilitate the management and investment process. The stages include:
  - 2.2.1 Upcoming: The upcoming stage represents a rocket that is live but has not yet reached its scheduled start time. During this stage, potential investors can review the rocket's details and prepare for investment once it transitions to the live stage.
  - 2.2.2 Live: The live stage denotes a rocket that is ready to accept investments based on specific conditions established by the game developer. At this stage, investors can contribute funds to the rocket if they meet the predetermined criteria, such as holding a certain token or meeting minimum investment requirements.
  - 2.2.3 Paused: The paused stage indicates that a rocket is temporarily on hold. During this stage, investors cannot contribute funds to the rocket. Paused rockets typically have a duration of five days or until the rocket reaches its specified end time, providing a window for the game developer to address any necessary adjustments or issues.
  - 2.2.4 Finished: The finished stage signifies the completion of a rocket within the defined time frame specified by the game developer. At this stage, the project has reached its funding goal, and the game developer can proceed with the next steps outlined in the rocket's plan. Investors can expect returns or rewards based on the conditions communicated during the investment phase.

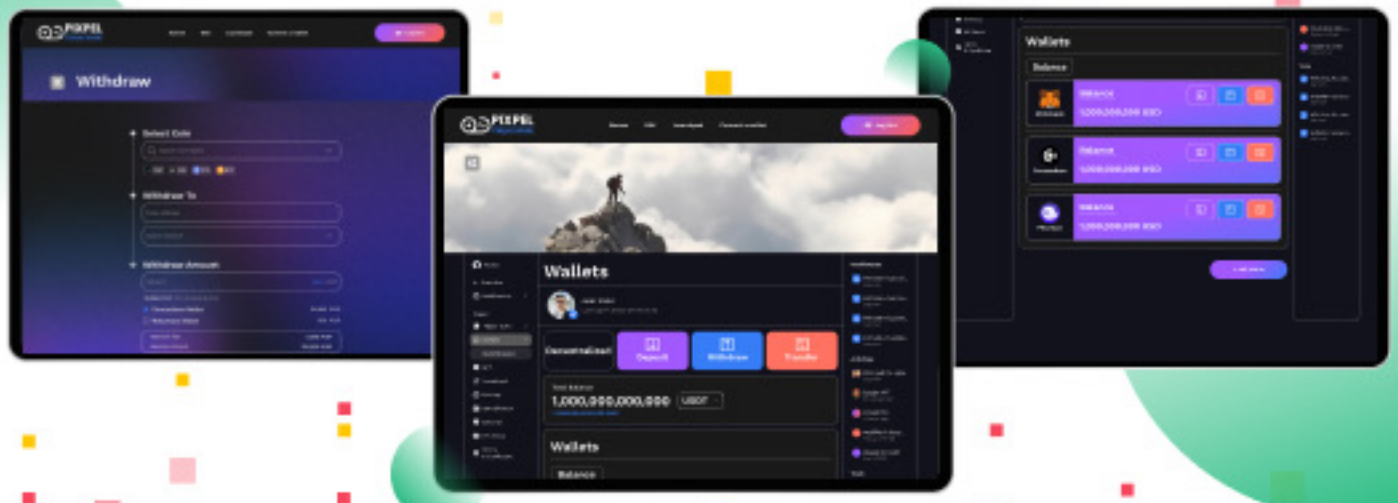

PIXPEL LAUNCHPAD

- 2.2.5 Cancelled: The cancelled stage occurs when a rocket is manually terminated by the owner before reaching its completion. In the event of cancellation, all invested funds are returned to the investors' wallets. The game developer is obligated to cover the cancellation fee and any associated gas fees incurred during the transaction process.
- **3. Benefits and Contributions:**
  Pixpel Launchpad offers several benefits to both game developers and investors:
- 3.1 Game Developers:
  - Access to a wide community of potential investors passionate about gaming.
  - Secure and transparent funding process leveraging blockchain technology.
  - Opportunity to showcase projects and receive feedback from the community.
  - Enhanced visibility for their games through the Pixpel Launchpad marketplace.
- 3.2 Investors:
  - Early access to promising game development projects and exclusive investment opportunities.
  - Transparent and secure investment process enabled by blockchain technology.
  - Ability to contribute to projects aligned with their gaming preferences and interests.
  - Potential financial returns and rewards based on the success of the funded rockets.
- 4. Conclusion: Pixpel Launchpad is a groundbreaking platform that connects game developers with their communities to secure funding for their projects in an easy, transperent and secure way.

BUSINESS WALLET

Business Wallet: The Business Wallet has been designed to solve problems that many developers encounter. The wallet includes unique features that simplify token creation, supply administration, and NFT management.

The Business wallet contains one primary account, which allows the user to manage funds going in and out of the wallet, along with three additional accounts, which are explained below:

- Start Account: This is the primary account of the wallet, where all crypto and fiat deposits initially go. It serves as a central hub for managing the currency flowing in and out of the game.
- Token Room: This account is dedicated to creating and managing tokens, with the ability to mint and burn tokens and create supplies and pools according to developers' needs. Additionally, the Token Room provides financial data on the token such as game capitalization, inflation and deflation rates by month and year, along with transaction history, market price history, and the most used token exchange pairs.
- Game Account: This section provides an overview of the game logistics, including data on NFTs and their contribution to the game, such as income relations between NFTs and tokens, purchase price and generated currency, and the quantity of NFTs used per day. It also displays the behavior of the token within the game, and allows developers to establish withdrawal limits and transfer funds out of the game through the Start account.
- Staking Portfolio: The Staking Portfolio section allows developers to create different staking options for investors and players. All the staking options created on the Pixpel platform are displayed here, including important details such as APR, remaining days, amount staked by investors, number of investors, amount remaining to be staked, and the name and nature of each staking option. The Staking Portfolio also includes many other features to aid in staking management.

TRADING SERVICES

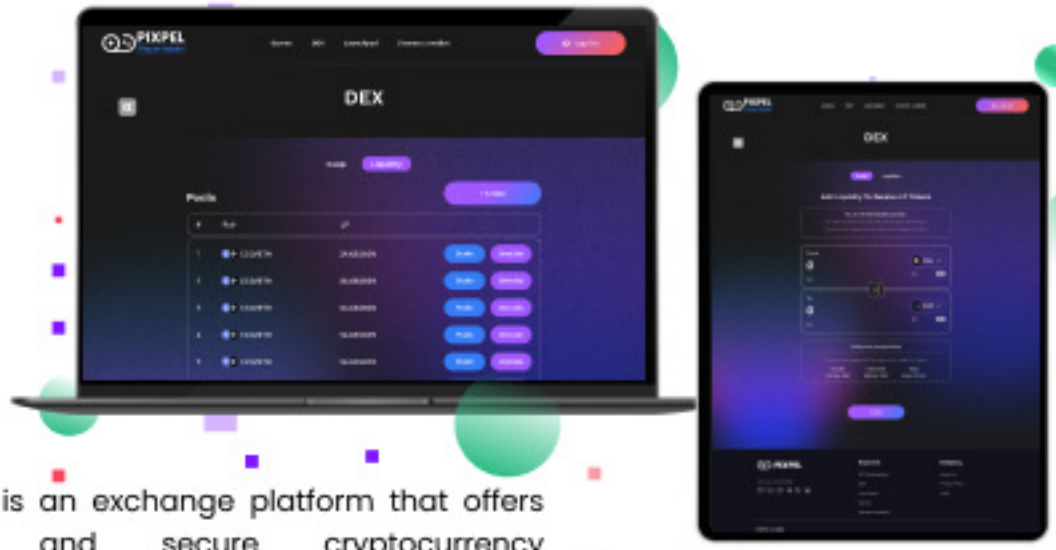

Pixpel is a comprehensive platform for crypto games, where trading services play a vital role. Our trading services encompass a decentralized exchange, centralized exchange, staking, peer-to-peer trading option, and fiat currency deposits. These services are securely managed and enforced by our dedicated team.

- Decentralized Exchange: We understand the significance of a decentralized exchange (DEX) in the crypto gaming industry, which is why we have developed a DEX that supports games and their tokens with competitive fees. Pixpel's DEX offers swift and hassle-free crypto swaps, automated trading through limit orders, passive income opportunities in liquidity pools, and seamless cross-chain trading. Our aim is to enable players to trade efficiently, diversify their portfolios, and maximize their crypto trading experience. Additionally, we value the importance of community connection,
- providing a peer-to-peer service that allows players to trade their tokens with fiat currency at a fair price determined by them
- FIAT Withdrawal & Deposit: As a crucial part of Pixpel, we offer withdrawal and deposit services to make it easy for our players to invest with our platform.
- Staking: Staking benefits both players and developers by enabling passive income generation for players and enhancing token utility and community engagement for developers. Pixpel's staking features provide an opportunity to maximize earnings and contribute to the growth of the games.

DEX

Pixpel DEX is an exchange platform that offers seamless and secure cryptocurrency transactions. With a range of powerful functions, it enables players and developers to effortlessly complete various tasks. Let's explore the key DEX functions provided by Pixpel:

- Swap Master: Effortless Crypto Swaps With Pixpel's Swap Master. Players can easily exchange coins from one cryptocurrency to another at the current market price. No more hard or time-consuming transactions. Our intelligent system ensures smooth and efficient swaps, giving instant access to a growing range of cryptocurrencies.
- Limit Orders: The Limit Orders feature offered by Pixpel enables players to trade cryptocurrencies even when offline. By setting specific commands based on predetermined conditions, such as target prices, players can take advantage of market movements and execute trades automatically. This powerful tool empowers players to optimize their trading strategies and make informed decisions.
- Liquidity Pools: They offer the opportunity for players to earn rewards by providing liquidity. In return, players receive rewards when other investors exchange the supported coins, allowing them to earn passive income while supporting the liquidity needs of the Pixpel community.
- Bridge: Pixpel's Bridge function enables fast and easy cross-chain exchanges. Players can seamlessly exchange coins between supported chains and effortlessly access desired tokens on their chosen chain. The Bridge function ensures fast, secure, and hassle-free cross-chain swaps, making it convenient for exploring different blockchains and diversifying portfolios.
- Faucet: Rewards for Crypto Enthusiasts. As a bonus, during the Testnet Event Pixpel offers a Faucet where players can be rewarded with crypto for completing tasks.

Pixpel's DEX is a game-changer for players and developers alike. With low fees, seamless cross-chain trading, and automated features, players can trade efficiently and diversify their portfolios, while developers benefit from increased liquidity and a wider audience for their tokens.

REVENUE MODEL

Pixpel's revenue model is based on our platform services, which offer incentives for players and developers to use our cryptocurrency, PIXP. The service fees for our platform are listed below:

Players NFT Marketplace fee

	Maker	Taker	Spread	Deposit with Credit Card	Deposit	Developer Withdrawal	Player Withdrawal	Using PIXP	Volume Discount
Crypto Trade	0.06%	0.09%	No	2%	No	Yes	No	30%	More than 10K USD 60% discount
Token Trade	0.1%	0.15%	Yes	2%	No	Yes	No	10%	More than 10K USD 20% discount

CONCLUSION

The creation of high-quality crypto games is still in its nascent stage, despite a significant number of gamers and crypto enthusiasts in the community. Presently, only a few companies are dedicated to producing such games, and they face challenges from unscrupulous developers seeking to defraud investors and steal resources. Moreover, a lack of economic knowledge among some developers has led to flawed reward systems and an increased risk of scams.

The prevalence of "rug-pulls" and "rug-slips" in crypto games discourages major corporations from investing, resulting in an uneven-quality landscape. While this opens opportunities for new developers to enter the field, it also impedes the progress and innovation of crypto games. However, the crypto games market is substantial, valued at billions of dollars. The NFT market generated around $24.7 billion worth of organic trading volume in 2022 and is predicted to grow to $80 billion by 2025, which is another reason for Pixpel to give it attention and fight against the various risks of the market while making it easier to access.

Pixpel is resolute in its conviction that its tools and services can serve as the cornerstone for developing techniques and regulations to instill trust in the crypto games industry. By employing rigorous testing methodologies and engaging in active collaboration with the community, Pixpel aims to enhance its offerings, fortify security measures, streamline financial procedures, reduce in-game investment expenses, establish reliable KYC standards, and unite a fragmented community eager to engage in gameplay and investment. Pixpel's ultimate objective is to make top-notch crypto games accessible to everyone, fostering a vibrant and inclusive ecosystem.
